

HUL242:: Tutorial-10

18/4

In this tutorial, you are given a series of utterances made by Adam at 2 yrs, 3mo and at 5 yrs, 2 mo approximately. These are taken from the CHILDES corpus by performing the following search: an utterance containing wh-words (either *what*, *where*, *when* and *which*) was searched for in the child's interactions with his caregiver (his mother).

Your task is to observe the formation of questions made by Adam in the early/late years. Specifically, describe the change in the usage of the wh-word in the sentence.
